SUMMARY

Full-stack developer building production mobile and web products end-to-end — React Native (Expo) clients, Java Spring Boot REST APIs, and Next.js admin panels and marketing sites. Over three months at AppSpace I shipped ten production releases across food-tech, spiritual-tech, wellness, fintech, sales-CRM and productivity verticals, covering 120+ REST endpoints and five Spring Boot backends. Comfortable owning the full slice: schema and Flyway migrations, JWT/OTP auth and RBAC, AI provider integration with fallback chains, in-app purchases, and the client-side design system on top.

WORK EXPERIENCE

Full-Stack Developer — Techhub · ImpactSuite.AI (AppSpace)

Mar 2026 – Present

- Shipped **10 production releases end-to-end in 3 months** — 6 full-stack mobile apps (React Native + Spring Boot + Next.js admin panels) and 4 Next.js marketing sites — across food-tech, spiritual-tech, wellness, fintech, sales-CRM and productivity verticals.
- Built **120+ REST endpoints across 5 Spring Boot 3.x backends** (Java 17 & 21) on a layered Controller→Service→Repository→Mapper architecture, over MySQL 8 schemas with Flyway migrations, JPA/Hibernate entities, soft deletes, audit columns and 15-char public unique-key identifiers.
- Delivered ~65 mobile screens across React Native + Expo (SDK 54/55) apps with offline-first design, biometric authentication, push notifications and in-app purchase subscriptions.
- Integrated **5 AI/ML providers** (OpenAI GPT-4o, Google Gemini 2.5 Flash, Groq Llama 3.3 70B, Sarvam AI, custom OpenCV OCR) with multi-provider fallback chains for resilience.
- Engineered Velocity CRM's **voice-to-structured-data pipeline** — Sarvam AI transcribes a sales agent's spoken daily report and Gemini 2.5 Flash parses the free-form transcript into typed CRM metrics, per-metric commentary and a summary, including bilingual English/Hindi spelled-out number resolution for Indian field-sales users.
- Built **AI receipt scanning** for the expense tracker — a Gemini vision pipeline turning a photographed bill or PDF into strict structured JSON (vendor, invoice date, tax, totals, line items) that auto-fills the expense form — backed by dynamic JPA Criteria Specification filtering, duplicate-bill detection and CSV export.
- Implemented **end-to-end AES-256-GCM encryption** with PIN-derived keys for Talk2Diary — the server stores only ciphertext (IV + auth tag) and never sees plaintext journal entries.
- Implemented **role-based access control** (Admin / Manager / Agent) with Spring Security, gating both API endpoints and distinct in-app navigation stacks, over a timeline-audited reporting domain with a read-optimised database view for aggregate queries.
- Built localization for 11 Indian languages via Sarvam Saaras v3 voice STT plus 6-language React Native i18n UI translations; set up Expo Geofencing for real-time darshan-arrival notifications.
- Integrated Apple StoreKit 2 and Google Play Billing with backend signed-JWS receipt verification, including TestFlight ↔ Production environment handling.
- Built **5 Next.js 16 admin dashboards** (App Router, Server Components, Server Actions, Turbopack) with HttpOnly-cookie JWT auth, user CRUD, plan management and analytics views.
- Shipped **4 Next.js 16 marketing and compliance sites** (React 19, Tailwind v4, Framer Motion) totalling 20+ static-rendered pages — per-route typed Metadata API SEO, flash-free pre-paint dark/light theming, route-level Suspense skeleton loaders and theme-aware screenshot/video media.

Frontend Developer (Intern) — Remote

Jan 2025 – Oct 2025

- Architected scalable, high-performance frontend components for CRM and LMS platforms using ReactJS and Tailwind CSS.
- Leveraged React Hooks (useState, useEffect, useContext) for optimized state management, component reusability and lifecycle handling.
- Delivered key business modules — Leads, Study Scheduler, HR Interviews, Service Exchange — improving overall workflow efficiency.
- Built interactive, data-driven dashboards, calendars and dynamic forms supporting real-time updates and user feedback.
- Integrated RESTful APIs in collaboration with backend teams via Figma and Postman, aligning design with functionality.
- Integrated omnichannel communication tools (Email, SMS, WhatsApp, Calls, Meets) directly within the CRM interface.
- Contributed to Agile cycles through code reviews, sprint planning and continuous UI/UX refinements using GitHub.

Frontend Developer (Intern) — Remote

May 2024 – Nov 2024

- Provided ongoing frontend support and maintenance for multiple web projects built with ReactJS and Tailwind CSS.
- Identified, debugged and resolved UI and functional issues across applications; refactored and modularized legacy components for readability, accessibility and cross-browser compatibility.
- Collaborated cross-functionally to reproduce, document and fix bugs reported by QA or end users.
- Worked closely with designers via Figma to align frontend changes with updated design specifications.

SKILLS

Languages: TypeScript, JavaScript, Java 17/21, Python, SQL

Frontend & Mobile: React, Next.js 16 (App Router, Server Components), React Native, Expo SDK 54/55, Tailwind CSS 4, Framer Motion, Reanimated, Zustand, React Navigation

Backend & Database: Spring Boot 3.x, Spring Security, Spring Data JPA, Spring WebFlux, JWT (JJWT), MySQL 8, Supabase (Postgres / RLS), Flyway, Maven, Caffeine Cache, OpenCV, REST APIs

AI / Auth / Integrations: OpenAI GPT-4o, Google Gemini 2.5 Flash, Groq (Llama 3.3), Sarvam AI STT, multi-provider fallback chains, Apple StoreKit 2, Google Play Billing, Twilio / SMSCountry OTP, Google OAuth, Apple Sign-In, Expo Push / FCM / APNs

Security & Tooling: AES-256-GCM E2E encryption, PIN-derived keys, biometric auth, HttpOnly-cookie JWT, RBAC, rate limiting, CORS, soft deletes + audit columns, Docker / Compose, OpenAPI / Swagger, Vitest + React Testing Library, Git & GitHub

SELECTED PROJECTS

- CheckEat — AI Food Nutrition Scanner · React Native, Spring Boot, Next.js, MySQL, multi-provider AI**
- Personalized food-label scanner scoring packaged food against a user's health profile (allergies, diabetes, pregnancy, RDA targets) using ICMR-NIN nutrition standards and FSSAI additive safety data.
 - 17-screen Expo app with 13-step health onboarding; 22 REST endpoints with 3-provider AI fallback (Gemini, Groq, GPT-4o); OpenCV background removal, Twilio OTP, StoreKit / Play Billing; Next.js 16 admin panel with HttpOnly-cookie JWT.
- Velocity CRM — Voice-Driven Sales Activity Tracking · React Native (Expo), TypeScript, Spring Boot, Java 21, MySQL, Sarvam AI, Gemini**
- Sales CRM where agents speak their daily report: Sarvam AI transcribes and Gemini 2.5 Flash parses the free-form speech into structured metrics (call attempts, answered, interested, follow-ups, rejections), per-metric commentary and a summary — collapsing a multi-field form into one spoken sentence.
 - ~10.7K LOC Expo client + layered Spring Boot / Java 21 API with 12 Flyway migrations; three-tier RBAC (Admin / Manager / Agent), JWT + SMS-OTP auth, period-filtered analytics on custom SVG charts with no charting dependency.
- AI Receipt & Expense Tracker · React Native (Expo), TypeScript, Spring Boot 3, Java 21, MySQL, Gemini**
- Cross-platform expense manager: users photograph a bill (image or PDF) and a Gemini vision pipeline returns strict structured JSON — vendor, invoice number/date, total, tax, currency, payment method, suggested category and itemised line items — auto-populating the expense form.
 - ~10K LOC Expo client + ~3.8K LOC Spring Boot API; dual-mode auth (password + SMS OTP) with JWT access/refresh; dynamic JPA Criteria Specification filtering with pagination; duplicate-bill detection; CSV export; multi-ledger SVG analytics; Dockerised with OpenAPI docs.
- Talk2Diary — Privacy-First Voice AI Journal · React Native, Spring Boot (Java 21), Next.js, AES-256-GCM**
- Voice-first journaling app: entries are spoken, transcribed, mood-analyzed by AI and stored end-to-end encrypted — the server sees only ciphertext, IV and auth tag.
 - 28-screen Expo SDK 55 app with biometric + PIN gate, PIN-derived AES-256-GCM keys, 11-language Sarvam Saaras v3 STT, GPT-4o mood analysis, and StoreKit 2 with Apple App Store Server API JWS verification.
- DarshanMitra — Hindu Pilgrimage Platform · React Native, Spring Boot WebFlux, Next.js, MySQL, geofencing**
- Plan-Pray-Preserve app for temple pilgrims — itinerary planning, group trips with invite codes, location-based darshan alerts and AI spiritual guidance in 6 Indian languages.
 - 20-screen app with React Native Maps + Expo Geofencing; 57 REST endpoints, 23 JPA entities, 15 Flyway migrations; Sarvam AI voice STT for 22 Indian languages; 3-provider AI chat fallback.
- NodesMap — Offline-First Notes & Productivity Workspace · Next.js 16, React 19, TypeScript, Supabase, Vitest — nodesmap.vercel.app**
- ~13K LOC TypeScript workspace with nested folders, a custom rich-text/markdown editor, drag-and-drop organisation, daily planner, Pomodoro timer and a radial SVG mind-map.
 - Offline-first architecture on a 1,200-line typed useReducer store with 40+ discriminated-union actions and a field-level remote merge reconciling Supabase rows with local-only data; email + Google OAuth (manual PKCE exchange) with per-user row-level security; optimised recursive folder analytics from O(n²) to a single cycle-safe O(folders + files) traversal; 369 Vitest / RTL tests.

EDUCATION

B.Tech, Electronics and Communication Engineering — B.V.C Engineering College (CGPA 6.3)	Odalarevu
Higher Secondary (Intermediate) — Narayana Junior College (64%)	Razole
High School — Z.P.H School (CGPA 9.5)	Kesanapalli

CERTIFICATIONS

Meta Front-End Developer Professional Certificate — Coursera, 2024
